Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for treating acne vulgaris.

Example 1; SEQ ID NO 5772; 1069pp; English.

```
encoding a Propionibacterium acress protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to immunogenic fragments of P. acres polypeptides. The invention additionally encompasses expression vectors and host cells comprising a ddittionally encompasses expression vectors and host cells comprising a polypeptide of the invention; a polymethed for stimulating an immune response specific for a P. acres invention; fusion proteins comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acres to polypeptide and an isolated T cell population comprising T cells prepared via this method, a vaccine composition (comprising T cells prepared via this method; a vaccine composition (comprising T cells populations, or autigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the present of P. acres in a patient; and a method for inhibiting the development of P. acres in a patient; and a method for inhibiting the development of P. acres in a patient. The P. acres polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acres proteins, or for stimulating an immune response specific for a P. acres protein. The polymucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acres, or for treating acre, and the kit is useful for performing a diagnostic assay. The present sequence represents a polypeptide proteined to be encoded by an ORF (open reading frame) contained within the P. acres polymucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly community. When the printed appecification, but was obtained in electronic format directly accurated ane
The invention relates to an isolated polynucleotide (ACF64435-ACF64733)

polypeptide, useful for diagnosing, preventing or treating acne vulgaris,

```
Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by a canes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. The arnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISAA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at

                                                                   in the invention leaders to an isolated polymuciculed (Archita); or conding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polymucleotides (ABM35674-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a additionally encompasses expression vectors and host cells comprising a polypeptide of the invention; and the invention; and the invention; and the invention; and proteins comprising a polypeptide of the invention; and method to stimulating an immune response specific for a P. acnes for polymucleotides, and an isolated T cell population comprising T cells prepared via this method, a vaccine composition (comprising T cells prepared via this method; a vaccine composition proteins, T cell populations, or autigen-presenting cells that express the polypeptides, polymucleotides, and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient; and a method for inhibiting the development of P. acnes in proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for adiagnosing, preventing or treating acnes proteins, or for stimulating an immune response specific for a P. acnes protein. The polymucleotides can also be used as probes or primers for mucleic acid hybridisation. The vaccine composition is useful for the stimulating and the kit is useful for performing a diagnostic assay. The present cading frame) contained within the P. acnes polymucleotides of the invention. Note: The sequence data for this patent did not form part of invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fitp.wipo.int/published_pot_general patent di
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .

                                                                                                                                                                                                                       The present sequence represents a Staphylococcus aureus protein of unknown function. The DNA sequence was isolated from a library of clones of S. aureus WCUH 29 in Escherichia coli. The DNA sequence can be used in the construction of riboxymes and antisense sequences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source of regularory elements for the control of bacterial gene expression. The present protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect a host against invasion by S. aureus, and conditions relating to Staphylococcal infection, e.g. Staphylococcal food poisoning, scaled skin syndrome, and toxic shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter;

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1) in the specification). ABNIS762 to ABNIS722 encode the human ORFX proteins given in ABNIG0010 to ABNIG00. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated sisorder in humans, and in the manufacture of a medicament for treating syndrome associated with ORFX-associated disorder. ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorder, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders disorders related to organ transplantation, aardiovascular diseases, diabetes mellitus, systemic lupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; open reading frame; ORFX; gene therapy; cancer; cirrhosis; hyperproliferative disorder; psoriasis; benign tumour; haemorrhage; degenerative disorder; osteoarthritis; neurodegenerative disorder; cardiovascular disease, diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune deficiency; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis;
treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human polymucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or which may induce production of other cytokines in other cell populations. The polymeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hammatopoiesis regulating activity, issue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.

Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-lost disease and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from systemic cytokine damage. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form at directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) clantifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent product is overexpressed or underexpressed; (12) determining the extent of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, ceruired for proliferation in cells other than S. aureus, S. typhimurium, the target prokaryotic essential genes. Claim 25; SEQ ID NO 57138; 1766pp; English.

```
additionally encompasses expression vectors and host cells comprising a polypucleotide of the invention; antibodies against polypeptides of the invention; invention; fusion proteins comprising a polypeptide of the invention; a method for stimulating an immune response specific for a P. acnes conjugated to the polypeptide and an isolated T cell population comprising P. acnes polypeptides, via this method; a vaccine composition (comprising P. acnes polypeptides, polymenteotides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a compatient; and a method for inhibiting the development of P. acnes in a proteins, T cell populations or antigen-presenting cells that express the polyment. The P. acnes polypeptides, polymolectides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the collypeptides are useful for diagnosing, preventing or treating acne conjugaris, or for stimulating or immune response specific for a P. acnes or protein. The polymucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present contouring an immunesment region. Note the specification, but was the patent did not form part of the printed specification, but was contained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antisense; prokaryotic essential gene; cell proliferation; drug design.

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

N-PSDB; ACA33084.

o;

```
uncention relates to an isolated nucleic acid compitising any one of the 6213 antisense sequences given in the specification where expression to the nucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated to polypeptide or its fragment whose expression is inhibited by the artisense nucleic acid; (4) an antibody capable of specifically briding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation or that inhibits cellular proliferation (8) inhibits or the biological pathway in which a proliferation or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or collection of an organism. The antisense nucleic acids required for cellular proliferation to isolate candidate molecules for rational dantifying proteins or screening for homologous nucleic acids required for cellular proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this part did not form part of the printed specification, but was obtained in electronic format directly from NIPO at the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ó

GENERAL INFORMATION:

APPLICANT: Gary Breton et. al

APPLICANT: Gary Breton et. al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA

TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS

PILE REFERENCE: 2709, 2004001

CURRENT PAPLICATION NUMBER: US,09/489, 039A

CURRENT FILING DATE: 2000-01-27

PRIOR APPLICATION NUMBER: US 60/117,747

PRIOR PLILING DATE: 1999-01-29

NUMBER OF SEQ ID NOS: 14342

SEQ ID NO 9511
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ·-

Sequence 4466, Application US/09543681A

Patent No. 660709

GENERAL INFORMATION:
APPLICANT: GARY BRETON
TITLE OF INVENTION: UUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABIL)
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.1002-001
CURRENT APPLICATION NUMBER: US/09/543,681A
CURRENT APPLICATION NUMBER: US 60/128,706
PRIOR FILING DATE: 1999-04-09
NUMBER OF SEQ ID NOS: 8344
SEQ ID NO 4466
LENGTH: 178
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0
                                                                                                                                                                                                0
                                                                                                                                                                                                                                                                                                                                                                                        Sequence 3711, Application US/09134000C

Patent No. 661716

GENERAL INFORMATION:
APPLICANT: Lynn DOUGETte-Stamm et al
APPLICANT: Lynn DOUGETte-Stamm et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
TITLE OF INVENTION: ENTEROCCCUS PAECALIS FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 032796-03-13
CURRENT APPLICATION NUMBER: US/09/134,000C
CURRENT FILING DATE: 1998-08-13
PRIOR PAPLICATION NUMBER: US 60/055,778
RECORD APPLICATION NUMBER: US 60/055,778
RECORD APPLICATION OF SEQUENCES AND THERAPEUTICS
RECORD APPLICATION NUMBER: US 60/055,778

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 21201, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: ABENGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ABENGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR PELING DATE: 1998-07-27
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: UNCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANK

TITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.132

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT APPLICATION NUMBER: US/09/248,796A

PRIOR APPLICATION NUMBER: US/09/14,725

PRIOR APPLICATION NUMBER: US/09/09/409

PRIOR FILING DATE: 1998-02-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 20375
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 41618, Application US/09270767

Sequence 41618, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;
FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AMIO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ARRUGINOSA POR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: NUMBER: US/09/252,991A

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR PILING DATE: 1998-02-18

PRIOR PILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

Sequence 2, Application US/09819249
Patent No. 6767704
GENERAL INFORMATION:
APPLICANT: Maldman, Scott A.
APPLICANT: Bark, Jason
APPLICANT: Schilz, Stephanie
TILLE OF INVENTION: Compositions And Methods For Identifying And Targeting Cancer Cell
TILLE OF INVENTION: Alimentary Canal Origin
FILE REFERENCE: TUUZ-12
CURRENT FILING DATE: 2001-03-27
PRIOR APPLICATION NUMBER: 60/192,229
PRIOR APPLICATION NUMBER: 60/192,229
PRIOR FILING DATE: 2000-03-27
MARGING OF THE CONTRACT OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE CANADA OF THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US-09-180-245-2
; Sequence 2, Application US/09180245
; Sequence 2, Application US/09180245
; Patent No. 6602659
; GENERAL INFORMATION:
; APPLICANT: Waldman, Scott A
APPLICANT: Carrithers, Stephen L
; TITLE OF INVENTION: Methods of and Kits and Compositions for Diagnosing
; TITLE OF INVENTION: Colorectal Tumors and Metastasis Thereof
; TITLE OF INVENTION: Colorectal Tumors and Metastasis Thereof
; FILE REFERENCE: TJU2161
; CURRENT FILING DATE: 1999-03-11
; EARLIER FILING DATE: 1997-05-02
; WUMBER OF SEQ ID NOS: 74
; SOFTWARE: PatentIn Ver. 2.1
; SEC ID NO 2
: LENGTH: 1073
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CTHER INFORMATION: Carboxy terminal tail - nucleotides 3148-3336, CTHER INFORMATION: corresponding to amino acids 1011-1073. Sequence 49921, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILE REPRENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT APPLICATION NUMBER: US/09/270,767

SOFTWARE: PatentIN Ver. 2.0

SEQ ID NO 49921

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 25

US-10-424-599-261961

J Sequence 261961, Application US/10424599

Publication No. US20040031072A1

GENERAL INFORMATION:

APPLICANT: La Rosa Thomas J

APPLICANT: Cao Yihua

APPLICANT: Cao Yongwei

TITLE OF INVENTION: Soy Nucleic Acid Molecules and Other Molecules Associated With

TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement

FILE REPERBENCE: 38-21(33223)

CURRENT APPLICATION NUMBER: US/10/424,599

CURRENT FILING DATE: 2003-04-28

NUMBER OF SEQ ID NOS: 285684

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
